MASS FLOW METER, BASED ON CTA PRINCIPLE

PVM

Prop.-V.
11

| | |
|--------------------------|---|
| Description | Mass flow meter directly measuring flow according to constant temperature anemometer principle. PVM 11 measures via a bypass, the other types measure the flow directly. |
| Features | Low pressure drop and immunity against dirt and humidity. Measurement unaffected by pressure and temperature changes. No moving parts, installation in virtually any position. |
| Principle | Two stainless steel probes - a heater and temperature probe - protrude inside the bore. A constant difference in temperature is created. The energy required is proportional to flow. |
| Media | compressed air, air as well as virtually all gases and gas mixtures |
| Compensation | Neither temperature nor pressure have to be compensated. There are no moving parts within the flow meter, therefore it is virtually wear-free. |
| Pressure drop | Low pressure drop because solely two stainless steel probes protrude inside the smooth, round measurement cell. The use of screw connections with a nominal size as big as possible is suggested. |
| Temperature range | 0 °C to 50 °C / 32 °F to 122 °F |
| Material | Operating press. max. 10 bar Differential press. max. 5 bar Body: aluminum, optionally SST 316L Elastomer: FKM, optionally EPDM or Kalrez Sensor: stainless steel 316L Filter/strainer: stainless steel |
