PRECISION VACUUM PRESSURE REGULATOR 70 L/MIN

Description Diaphragm vacuum regulator ensuring high precision in both vacuum and positive pressure range.

Media compressed air or non-corrosive gases

Supply pressure max. 17 bar

response sensitivity: < 2 mbar Accuracy by handwheel with locknut Adjustment

Air consumption max. 2.8 I/min in positive pressure range

Flow rate 70 l/min*1 in vacuum range, 900 l/min*2 in positive pressure range

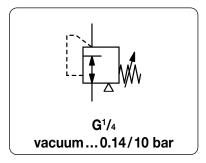

G¼ on both sides of the body, screw plugs supplied Gauge port

Mounting position any

-40 °C to 90 °C / -40 °F to 194 °F Temperature range Material

aluminium die-cast Inner valve: stainless steel and brass Elastomer: NBR/Buna-N

Special options, add the appropriate letter

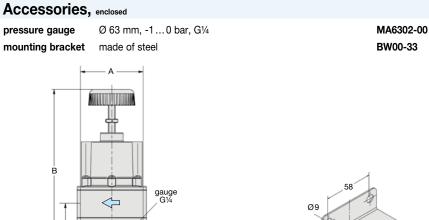

tamper-proof cap

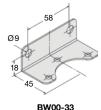

connection thread R250-0 . . N

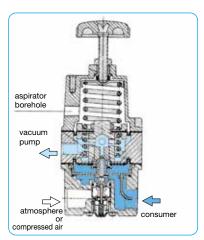

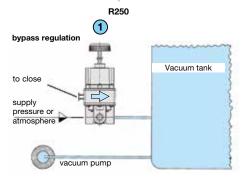

R250

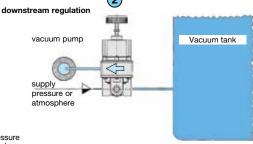

cross-section connection for downstream regulation

Bypass regulation Upstream installation is preferred when rapid exhaust of a tank or system is required. That way the vacuum pump acts directly upon the tank and is not being throttled by the vacuum regulator. A strainer is provided on the pressure side or atmospheric, an additional filter is recommended.

B *

Downstream installation is prefered when rapid exhaust of a tank or system or over-pressure filling is required. The inlet pressure connection can optionally be left open to atmosphere.

* Product group

- $^{\star 1}$ for compressed air at -0.98 bar supply pressure and $$ 0 bar outlet pressure $^{\star 2}$ for compressed air at $$ 7 bar supply pressure and 1.4 bar outlet pressure
